In this project, our goal is to create a PostgreSQL database that gathers all the data from every Olympic Games since 1920. In this report, we will present seven extreme athlete cases by introducing the athlete, stating in which Games they participated, and explaining the reasons that make each case extreme.

### **Case 1:** The youngest athlete

There are several athletes who are the same age, but we have chosen to present Magdalena Cecilia Colledge. She is a British figure skater who participated in the 1932 Olympics in Los Angeles at the age of 11 and also in the 1936 Olympics in Berlin.

### **Case 2:** The oldest athlete

Oscar Gomer Swahn was a Swedish shooter who participated in the 1920 Olympics in Antwerp at the age of 72.

### **Case 3:** The lightest athlete

The lightest athlete is Choi Myong-Hui, a North Korean gymnast who weighs 25kg. She participated in the 1980 Olympics in Moscow.

### **Case 4:** The heaviest athlete

Ricardo Blas Jr. is a judoka from Guam who weighs 214kg. He participated in the 2008 Olympics in Beijing and the 2012 Olympics in London.

### **Case 5:** The tallest athlete

Yao Ming stands nearly 2.26m tall. He is a Chinese basketball player who participated in the 2000 Olympics in Sydney, the 2004 Olympics in Athens, and the 2008 Olympics in Beijing.

### **Case 6:** The shortest athlete

Among athletes measuring only 1.27 meters, we have chosen to present Rosario Briones. She is a Mexican gymnast who participated in the 1968 Olympics in Mexico City.

### **Case 7:** The athlete with the longest name

"Max Emanuel Maria Alexander Vicot Bruno de la Santísima Trinidad y Todos los Santos von Hohenlohe Langenburg" is a skier from Liechtenstein who participated in the 1956 Olympics in Melbourne.
